

ZACHARY STALLINGS

FULL STACK SOFTWARE ENGINEER

contact@zachstallings.dev | 805-746-7123 • LinkedIn • Github • Portfolio • Ventura, CA

TECHNICAL SKILLS: JavaScript • TypeScript • Python • SQLAlchemy • SQLite3 • PostgreSQL • Sequelize • HTML • CSS • Flask • Django • Express • React • Redux • Node.js • Redis • Amazon S3 (AWS) • Websockets • Proficient in Git

RELEVANT SKILLS: SCRUM Methodologies • Pair Programming • Quality Assurance

EXPERIENCE

FULL STACK WEB DEVELOPER • *Toontown Rewritten* • Remote 6/2023 – Present

- Helped transition the main website's backend from Java to Django (Python), enabling easier updates and contributions from Python-skilled game developers.
- Created a user-friendly interface enabling non-technical staff to efficiently manage blog posts, moderate in-game chats, and review player-submitted character names.
- Collaborated with UX designers and brand artists to create visually compelling single-page layouts, showcasing major new game updates.
- Developed and integrated a Cookie acceptance system to align with European Commission's regulations, collaborating with legal and development teams to enhance website privacy and ensure compliance with international web privacy laws.

QUALITY ASSURANCE SPECIALIST • *Toontown Rewritten* • Remote 4/2021 – Present

- Led automated Quality Assurance testing for Toontown Rewritten's Django-based website, ensuring seamless functionality and reliable integration with the main game platform.
- Directed Quality Assurance for "The Sellbot Force," the largest game update since 2008, involving extensive gameplay, log analysis, and cross-departmental feedback.
- Identified and reported critical issues, providing constructive insights to enhance game stability, functionality, and overall player experience.

PROJECTS

SLACORD *App Academy* | Github | Live Python • Flask • React • Redux • Amazon S3 • Websockets • SQLAlchemy

- Spearheaded a collaborative project, "Slacord", a Discord-inspired platform, utilizing Python and Flask for the backend, and integrated Amazon S3 for image storage, ensuring a user-friendly experience for media sharing.
- Implemented real-time chat features using Websockets. Utilized Redux middleware to manage WebSocket connections and dispatch actions to update the state in real-time.
- Employed SQLAlchemy for efficient database operations, streamlining data handling and integrity.
- Established useHistory and useLocation hooks from the React-Router package to manage navigation and redirect users based on authentication status.
- Participated in Daily Stand Ups, Pull Requests, and Pair Programming in a 1-week sprint, delivering a platform with enhanced user authentication and seamless real-time messaging, improving user experience and engagement.
- Established a CI/CD pipeline utilizing GitHub for code collaboration and version control, and Render for seamless deployments, ensuring continuous delivery of new features and updates to the live platform.

AMAZING *App Academy* | Github | Live JavaScript • React • Redux • Express • Sequelize

- As a solo project, built "Amazing", an e-commerce platform akin to Amazon. Utilized React for a user-friendly UI, Redux for organized state management, Sequelize for efficient data handling, and Express for streamlined server tasks.
- Employed React's component-based architecture and hooks to create interactive and real-time updates on product listings, cart contents, and wishlist functionalities, leading to a more engaging user interface and improved user satisfaction.
- Enhanced request-response efficiency in an Express backend through optimized routing, middleware, and Sequelize queries, coupled with error handling and asynchronous programming for improved responsiveness.
- Engineered a two-tier Redux store to manage cart operations, enhancing user experience by enabling seamless transitions from cart updates to secure purchases, and ensuring accurate backend synchronization.

EDUCATION

APP ACADEMY • Full Stack Software Engineer Certification

3/2023 – 9/2023
